It is made from silk that had had the design woven into the bag.

*I like this bag **because** it is hand sized. **Moreover**, it has nice detailing on it. **To add to this**, I like the red trimming.*

1. (Use an average to compare)...

P – Females have shorter foot length than males.

E – This is **because** the median for females is 23 cm whereas the median for males is 26cm.

E – **This could link** to males being taller than females, which we will explore later.

3. (Use the IQR or the range to compare

P – The foot length for females was less varied than males.

E – This is shown as females have a shorter inter quartile range (3 cm) than males at 4 cm.

E – **Therefore**, female's foot length was of a more similar length than males.

The main reason why I decided to choose this dish to remake and improve was because it was the highest fat content and I was determined to change that and make it lower in fat and more suitable for my diet;

additionally, I wanted more of a challenge rather than remaking a dish without making any changes.

Consequently, the dish went down well with my test tasters and **although** I wasn't given full marks, I scored 75 out of 80. **Overall**, they loved the crunchy filo pastry on top.

In the UK today, around 13 million people permanently follow a diet. There are many different types of diet which people may follow, such as vegetarian, dairy free, gluten free and calorie controlled, along with many more. I am currently researching low fat diets and in this investigation I will look **firstly** at what makes a low fat diet, **then** which foods are actually 'low fat' and **I will then** design my own low fat recipe. This will **finally** be tested and evaluated. **I hope to come up with a recipe which is tasty, healthy, low in fat and which people will enjoy eating.**
